QUICK START INSTRUCTIONS FOR YOUR ODORSTOP OZONE GENERATOR

1. Remove optional filter from back of unit and insert ceramic plates. Reinstall filter. Plug unit into a grounded wall outlet.
2. Close all outside doors and windows of the area to be treated. Make sure inside doors, such as bathroom and closet doors, are open.
3. If the space to be treated has a central heating or cooling system turn the fan setting to "On" to gently circulate the air while the space is being treated.
4. Make certain all occupants and pets have been removed.
5. The Ozone Output level should be set at "Medium" to "High" depending on the level of odors and amount of time for treatment.
6. Set timer to desired treatment time and then **exit the space during treatment.**
7. Upon returning to pick up the unit, make sure timer dial is in the "Off" position.
8. Allow at least one hour after treatment time is finished before re-occupying the space. Open the outside windows and doors upon re-entry.

Optional Air
Filter to Keep
Plates Clean

INSERT PLATES BEFORE USE

**FOR USE IN UNOCCUPIED
SPACES ONLY!**

Note: A higher Ozone Output setting will sanitize the space more quickly. The amount of time necessary to eliminate odors depends on how entrenched the odors are. The effect of ozone will vary depending on environmental conditions such as the size of the space and the severity of the odors. Temperatures below 70 degrees F or high humidity levels may reduce ozone effectiveness. A dehumidifier may be used in conjunction with the ozone generator.

Hold Position: For more severe odor problems, turn the timer dial to the left to the indefinite "Hold" position and **vacate the space**. This will allow for much longer sanitization. Upon return be sure to turn the timer dial to the "Off" position immediately and ventilate area. **Do not reoccupy until sanitizing smell is gone.**

Warning: For use in unoccupied spaces only! Excess ozone concentrations can cause mucous membrane and respiratory irritation. If you detect the sanitizing smell when you walk into the room, be sure to turn the timer dial to the "Off" position immediately and ventilate area. **Do not reoccupy until sanitizing smell is gone.**
